**Web Application Proposal:** Online Expense Management System

**FEATURES**

**Log in**
After the user registers an account, the user may log-in. Once logged-in, the user can start creating new expense entries, edit their entries, and other features.

**Log out**
The user may log out from their account. Moreover, if the browser is closed, the user is automatically logged-out for data protection purposes.

**Register**
The user must register an account if they want to make use of the online expense management system. Here, the user must enter their email, username, and password.

**Budget Goal**
The user sets a goal budget. The app's interface will indicate whether the user has exceeded their budget.

**Savings Goal**
The user sets a goal savings amount. The app will indicate whether the user has reached their savings goal.

**Balance**
This indicates the cash the user has on hand. It is calculated by total income subtracted by total expense.

**View Expenses**
The user retrieves the complete list of expenses for a certain date period.

**Add Entry**
Users can make a new entry at any given time.

**View Entry**
The user can view details of the selected entry.

**Update Entry**
The user can modify an expense entry on a certain date.

**Delete Entry**
The user may delete an entry made.

**Search**
This feature will allow users to search for any entry based on entry date, entry description, category, and OR number.

**Delete account**
A user will be able to delete their account.

**View account details**
The user may view his account details including their username and email.

**Edit account details**
Users may edit their usernames and email addresses.

**Add Note**
Users may add notes to each entry.

**Edit Note**
Users may edit notes made in an entry.

**Delete Note**
Users may delete notes made in an entry.
